

RACKMAN LIGHT DUTY CANTILEVER RACKING

It can often be a pain trying to store lightweight stock like pipes, timber and tubing in conventional racking when it's so long and awkwardly shaped.

That's why Rackman Australia's Light Duty Cantilever Racking is a cost effective and perfectly designed solution for storing lighter product sets, low volume or hand coated applications which features:

- A maximum of 250kg – 350kg UDL per arm (depending on the configuration and arm length)
- A selection of either Powder Coating for indoor use or Hot Dip Galvanizing (HDG) for outdoor use
- Single and double-sided options that provide maximum storage capacity
- Roofing arms available in HDG

PRODUCT SPECIFICATIONS

POWDER COAT FINISH (INDOOR USE)

COLUMN HEIGHT (mm)	COLUMN SPACING (mm)	ARM LENGTH (mm)
