

RACKMAN PALLET RACKING RSA FLOORS

Pallet Racking Raised Storage Areas (RSA) Structures are typically a more cost-effective design than structural floors and allows shelving levels to be easily added or removed within the structure.

It's perfect for taking advantage of the head space of any warehouse or workshop plus increasing storage space by utilising the racking structure underneath the floor.

FEATURES

- 22mm Tongue and Groove Structural Particle Board Flooring or Ply options
- Easy to construct, disassemble and relocate with floor ratings typically between 300kg/m² to 500kg/m²
- Maximise storage area above and below with multiple shelving options

BENEFITS

- Easily combined with chutes, staircases, handrails, roller and up and over gates
- Significantly increases the capabilities of the work area
- It's a cost-effective storage solution that complies with Australian Standards
