

RACKMAN STRUCTURAL RSA FLOORS

Structural Raised Storage Area (RSA) Floors are engineered to meet Australian Standards and Building Codes and can be customised specifically to meet the proposed requirements which includes size and load capacity.

This system is perfect for those who want to utilise the head space of any warehouse or workshop with the least possible obstructions underneath and can be applied to suit all product storage, archiving, work area and office space storage solutions.

FEATURES

- 22mm Tongue and Groove Structural Particle Board Flooring or Ply options
- Easy to construct, disassemble and relocate with floor ratings typically between 300kg/m² to 500kg/m²
- Built with a large clear space for vehicle and equipment storage with a high load rating

BENEFITS

- Easily combined with chutes, staircases, handrails, roller and up and over gates
- Significantly increases the capabilities of the work area
- It's a safe, secure and economical storage solution
- Complies with flooring standards AS 1657
